Description

The DTML/DTWL are closing dampers for use when closure of the air flow is required.

The damper blade consists of a double plate fitted with a sealing ring made of non-ageing EPDM rubber which forms an airtight seal against the side.

The damper cup allows for up to 50 mm of insulating material.

DTML: The damper cup is fitted with a handle making continuous adjustment possible between 0 and 90°.

DTWL: The damper cup is fitted with a cross-arm for mounting 2 wires, making remote control possible.
